Her no-nonsense writing style makes her instructions easy to follow. I'm glad to add this to my collection but if you are a beginner, get Smart Soapmaking, it will give you enough solid information to get off to a confident start. If you add Milk Soapmaking to that one, you don't really need this one, but for the price, I was happy to add it to my collection.2 of 2 people found the following review helpful. Another excellent addition to Watson's series of soaping books!By Daniell KExcellent, solid foundation of knowledge on soap making. All of the advice in this book is based on science and well-founded personal experimentation and it shows. The recipes in here that I have used have been top notch. My husband particularly likes

the recipes for beer soaps, but I'm looking forward to making some cucumber soaps this next summer with produce from my garden. Thanks for making another excellent book, Anne Watson! 0 of 0 people found the following review helpful. Great advise and direction for specialty soapBy kstumpHere is yet another of the books I have come to use as indispensable tools for soap making. The books have stayed consistent in writing style, being both easy to read, understand and follow along with the processing. These are specialty soaps made out of all kinds of different ingredients, it is amazing just what you can use for soap making. There are great recipes in this one and then she gives how to go on and find more things to try, advising so not all of your trials will flop. I especially like the citrus portion as I understand this variety is harder to get to set, but smells wonderful. I have been incredibly pleased with every book in this series from beginning to end and would definitely recommend them.

Soapmakers may love to add a variety of materials to soap, but they find that some cause more trouble than others. In the heat of the chemical reaction, an ingredient might discolor, or lose its scent, or develop a bad smell. Or it might cause problems during soapmaking, giving off noxious fumes, or making the soap harden so fast that there's no time to pour it in the mold. Help has arrived. Anne L. Watson extends the low-temp techniques from her book "Milk Soapmaking" to making soap from a variety of special ingredients, including cucumber, citrus, pine tar, beer, and wine. Soaps that have long challenged home soapmakers will now pose no problem at all.
